

durable high performance labels  
for electronic, automotive, industrial, medical applications

# ELD™ Series

## Electronic Label Dispenser

The ELD™ 100 and 101 electronic label dispenser offers a cost effective dispensing solution. The dispenser automatically removes materials such as paper, vinyl, acetate, polyester and foil from the liner. The photosensor detects label removal and supplies the next label. This technology provides accuracy and reliability.

The durable metal construction requires low maintenance and the adjustable strip plate allows for hard-to-release labels. No tools are required for dispensing various sized labels. The high torque motor easily handles large diameter label rolls. The ELD™ 100 is also ideal for micro-miniature labels.

### Highlights

- Accurately Dispenses Micro-Min to Large Labels
- Reliably Uses Photosensor Technology

### Features

- Label and Die-cut Part Dispenser
- High Torque Motor
- Durable Metal Construction
