

durable high performance labels
for electronic, automotive, industrial, medical applications

ELP™ Series

Thermal Transfer Printers

IDENTCO offers the ELP™ Series of thermal transfer printers. Faster ELP™ printers allow users to load, print and change materials more efficiently. The ability to operate with a computer or network or in Stand Alone Mode offers flexible printer operation.

The Stand Alone Mode allows users to print labels without the use of a computer. Label formats are first created on labeling software, such as Nice Label. A USB flash drive transfers the data into the printer through the USB port. After saving the formats using the easy to follow menus, the ELP™ is ready to print without a PC. Stand Alone Mode promotes cost savings by ease of use, freeing up valuable floor space and allowing diverse printer placement.

Highlights

- Extremely Cost-Effective Printer
- Quickly Integrates with Production Lines
- Readily Accepts Ribbons -Coated Side In / Side Out

Features

- Multiple Connections (*Serial, Parallel, USB, Ethernet & Wireless*)
- Nice Label Software
