

REEL-e™ *Anti-Static Plastic Reel*

- Robust design
- ESD
- Recyclable
- Dust-Free
- Feeders & Auto-apply

High speed automatic application equipment requires a precisely manufactured part. IDENTCO has the experience to design and produce die cut parts for all major auto-apply machines. To eliminate damaging static buildup in the production area, IDENTCO utilizes the **REEL-e™**, an anti-static plastic reel.

The **REEL-e™** is an improved label/die cut part spool for feeders and auto-apply machines. These reels are recyclable and 100% RoHS compliant. Constructed from an electro-static dissipative material to aid in the elimination of static build-up in the production area. The reels now offer increased flexibility during production to ensure that the final product will meet all specified requirements.

The **REEL-e™** is part of our continuous commitment to ISO 14001, to decrease our impact on the environment.
